## Remote maintenance for front-door stations with display module

### Notes

- Remote maintenance is only possible for **front-door stations with display module AMI1010x!**

For remote maintenance you need the software *ADx configurator* (part of the maintenance package FBI1210-0, not part of the delivery, see *Accessory*, page 24.

**!** For settings and programming of the display module, you can **only** use a **PS/2-keyboard** (not part of the delivery, see *Accessory*, page 24)!

A PC keyboard with USB connection or a USB adaptor cannot be used!

System requirements for the ADx configurator:

- CD-ROM drive  
Operating systems: Windows 98 SE, 2000, XP, Windows 7
- The ADx configurator is part of the maintenance package FBI1210-0, refer to *Accessory* page 24 or [www.tcsag.de](http://www.tcsag.de) >downloads > software > configurators, ADx

System requirements for the maintenance package:

- USB-Host-Interface, USB 1.2 or USB 2.0 standard
- Operating systems: Windows XP (as of SP2), Vista or Windows 7, Linux (Kernel with CDL Interface)
- The RS485 interface is located at the display module. To reach the interface, the front-door station has to be opened.

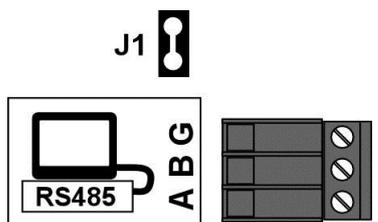

### Connection via RS485 interface

#### Attention!

**!** If front-door stations with modules are located in different buildings and if the stations are eventually supplied via different mains phases, a direct connection of these front-door stations via the RS485 interface is not allowed!

The potential shifts that may occur at the 230 V side, can cause damage to the front-door stations.

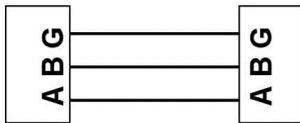

- The connecting lines between front-door station and converter have to be twisted (twisted pair), e. g.: J-Y(St)Y2x2x0.6 or CAT5 (AWG23).  
The line length should not exceed 1500 m.  
The baud rate set at the converter must be identical to the baud rate set at your PC-COM-ports.

**J1** In delivery state, the matching resistor is set.  
J1 has to be removed, if the front-door station is not placed as last device at the end of the RS485 strand.

**Terminal G** to connect a shield  
**Terminals A, B** to connect the data cables

front-door station converter

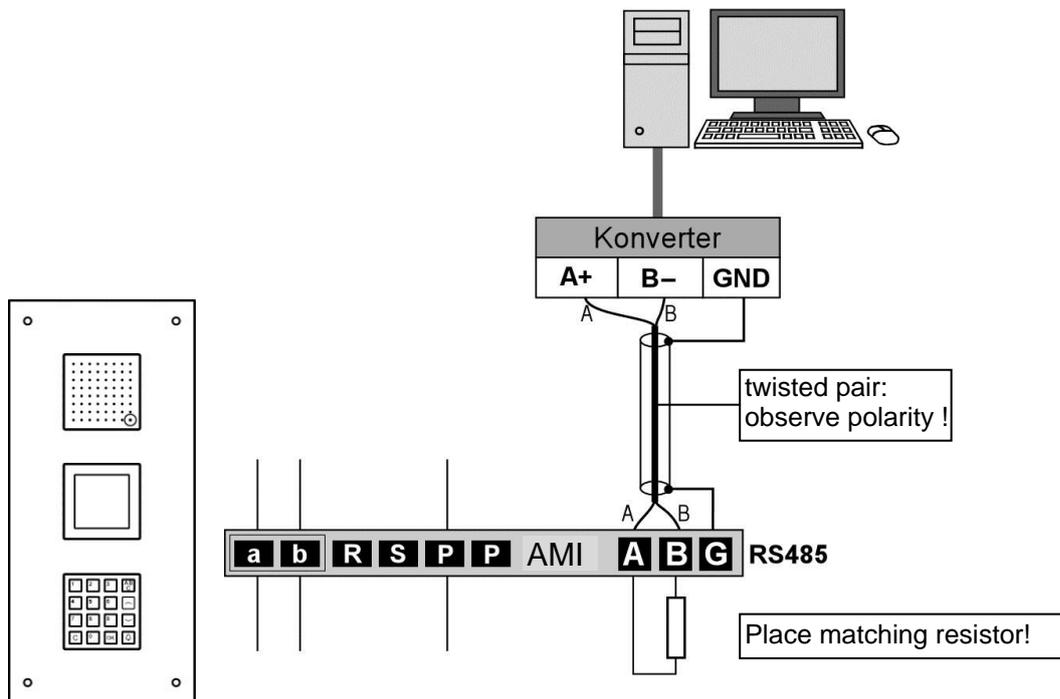

Connection diagram for RS485 interface

### Connection via USB interface

- The interface is only suited for data transmission over short distances.
- For this, connect the front-door station with a USB cable directly to the PC.

### Wiring diagram (RS485): basic wiring with a front-door station and PC

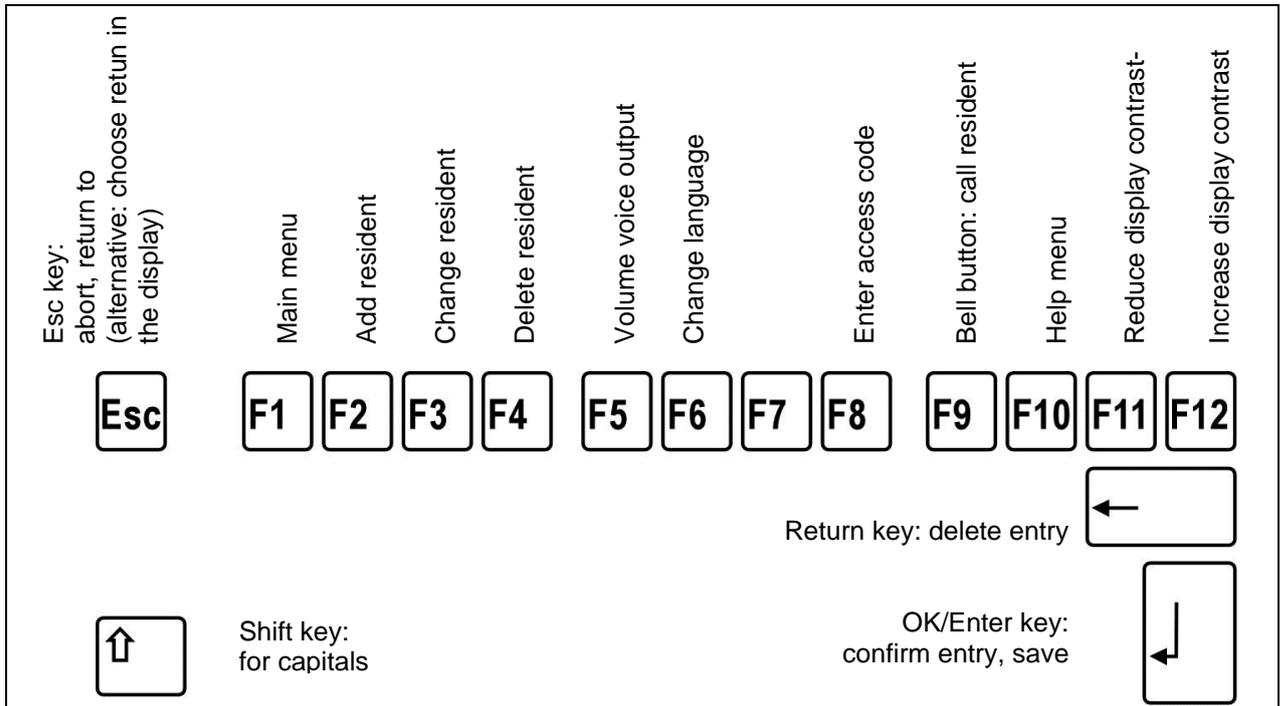

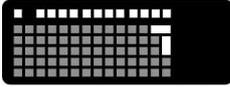

**!** Series circuit when connecting several front-door stations with modules!

## Explanations

### Connect the keyboard

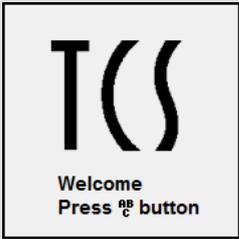

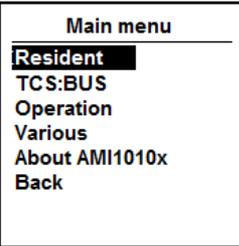

- At the loudspeaker module, remove the cover for the keyboard connection with an **allen key 3 mm** and connect a PS/2 keyboard (refer to product information *Modules of the series AMI in front-door stations*).
- Choose the requested menu by pressing the function key at the PS/2 keyboard.

### General notes

1. If the main menu has not been called up with the function keys F1, F2, F3 or F4 for a longer period (> 2 min), the master code is requested in order to return to the main menu or to the respective functions.
2. **Esc key:** return to the previous menu (also: choose **return** in the menu) resp. to the resident list.  
**OK/Enter key:** to enter/confirm/save the OK/Enter key of the PS/2 keyboard or, if available, the OK key at the display front-door station can be used.
3. **Return key:** the character entered last will be deleted.
4. Return: By selecting this menu item, you return to the previous menu resp. to the resident list.
5. If no entry is made, the device automatically navigates to the next item:
  - after approx. 15 sec from the help menu to the resident list.
  - after approx. 30 sec to the resident list, after any button has been pressed.
  - after further 30 sec to the start screen.

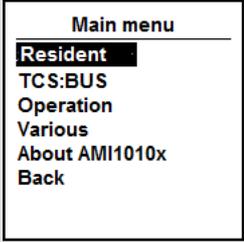

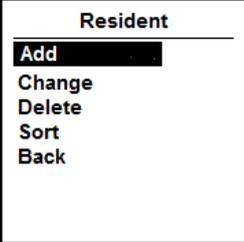

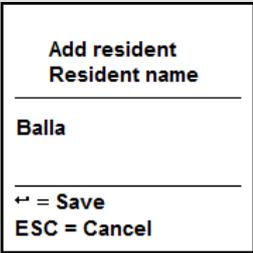

## To the main menu

Display / Entry	Action / Description												
	<p>The display front-door station is ready for operation. The start screen is displayed. (example corresponds to the factory settings)</p> <p>(change: see operation &gt; start screen, p. 18.)</p>												
	<p>To start the programming: call up the main menu :</p> <ul style="list-style-type: none"> <li>• Press F1 key at the PS/2 keyboard</li> </ul>												
	<p>The master code is requested.</p> <ul style="list-style-type: none"> <li>• Enter the master code via the PS/2 keyboard. Factory setting: 1234. Also see <i>WE</i> (factory settings) and <i>general notes</i>.</li> <li>• Confirm the entry (with OK/Enter key).</li> <li>• Continue with further entries within 30 sec.</li> </ul>												
	<p>After the master code has been entered correctly, the main menu appears:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 30%;"><b>Resident</b></td> <td style="width: 40%;"><b>The resident database</b></td> <td style="width: 30%; text-align: right;"><b>p. 7</b></td> </tr> <tr> <td><b>TCS:BUS®</b></td> <td><b>Settings BUS parameters</b></td> <td style="text-align: right;"><b>p. 11</b></td> </tr> <tr> <td><b>Operation</b></td> <td><b>Settings for the user</b></td> <td style="text-align: right;"><b>p. 15</b></td> </tr> <tr> <td><b>Verschiedenes</b></td> <td><b>Time, temperature, save/load</b></td> <td style="text-align: right;"><b>p. 18</b></td> </tr> </table>	<b>Resident</b>	<b>The resident database</b>	<b>p. 7</b>	<b>TCS:BUS®</b>	<b>Settings BUS parameters</b>	<b>p. 11</b>	<b>Operation</b>	<b>Settings for the user</b>	<b>p. 15</b>	<b>Verschiedenes</b>	<b>Time, temperature, save/load</b>	<b>p. 18</b>
<b>Resident</b>	<b>The resident database</b>	<b>p. 7</b>											
<b>TCS:BUS®</b>	<b>Settings BUS parameters</b>	<b>p. 11</b>											
<b>Operation</b>	<b>Settings for the user</b>	<b>p. 15</b>											
<b>Verschiedenes</b>	<b>Time, temperature, save/load</b>	<b>p. 18</b>											

## The resident database

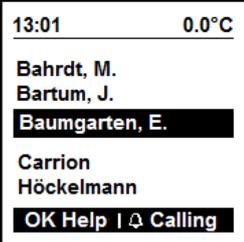

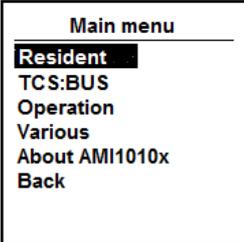

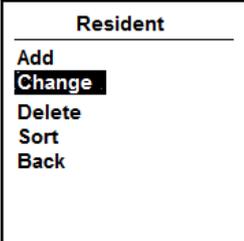

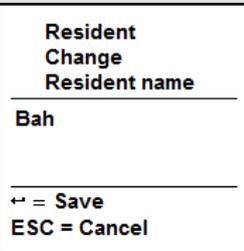

### Add new resident dataset

- **Note:** Save your settings and resident datasets on the EEPROM memory!  
To save go to process other > save memory (see p. 20).

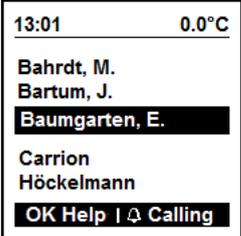

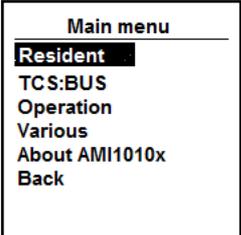

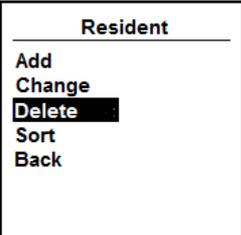

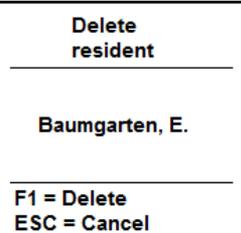

Display / Entry	Action / Description
 <p>or:</p>  	<ul style="list-style-type: none"> <li>• Press the F2 key at the PS/2 keyboard</li> </ul> <p>or:</p> <ul style="list-style-type: none"> <li>• Choose the <i>Resident</i> in the main menu.</li> <li>• Choose <i>Add</i> in the resident menu.</li> </ul> <p><b>Note:</b> If a fault message is displayed stating that adding is not possible, the option <b>hide empty datasets</b> must be deactivated (see p. 15)</p>
	<ul style="list-style-type: none"> <li>• The name of the resident can consist of 32 characters. The display scrolls from the 15th character (displayed in the resident list as ticker.)</li> <li>• Possible special characters:  \$!"#\$%&amp;/()=?\^*+^` ,;:-_&lt;&gt;</li> <li>• Also alpha-numeric characters (letters and/or digits) are possible.</li> <li>• <b>Notes on sorting:</b> Always enter numbers the same way: same number of characters, you may add preceding zeros (example: 123 and 045) Blanks are evaluated when sorting (e.g. blanks after comma when trailing first names: Müller, Armin and Müller, Werner).</li> <li>• Confirm the entry.</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>! Attention: Save your entries by pressing the OK/Enter key, otherwise the dataset is rejected!</b></p> </div> <p><b>Special case exclamation marks</b></p> <ul style="list-style-type: none"> <li>• If as <b>first character</b> an exclamation mark (!) is entered, this dataset can be hidden as <b>unused dataset</b>. This dataset will not appear in the resident list, see <i>operation &gt; options &gt; hide empty DS</i> (see p. 15).</li> <li>• After the exclamation mark any text can be entered to describe the dataset.</li> <li>• If only an <b>exclamation mark</b> is entered, the flat number will be displayed behind the exclamation mark when saving the dataset. If the dataset is not hidden, <i>!flat number</i> appears in the resident list instead of a name.</li> </ul>

Display / Entry	Action / Description
<div style="border: 1px solid black; padding: 5px;"> <p style="text-align: center;"><b>Add resident</b> Flat number</p> <hr/> <p style="text-align: center;">12</p> <hr/> <p>↵ = Save ESC = Cancel</p> </div>	<ul style="list-style-type: none"> <li>Enter a flat number with max. 8 digits. (Entry is necessary!)</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>! Attention: If the flat number includes letters, calling a resident by entering the flat number is not possible!</b></p> </div>
<div style="border: 1px solid black; padding: 5px;"> <p style="text-align: center;"><b>Add resident</b> Floor</p> <hr/> <hr/> <hr/> <p>↵ = Save ESC = Cancel</p> </div>	<p><b>Note:</b> This dialogue only appears, if the administration of floors has been activated under <i>operation &gt; options &gt; display floor</i> (p. 15).</p> <ul style="list-style-type: none"> <li>Here, optionally a number from -10 to 126 can be entered. If other numbers are entered, e.g. 127, the output of the floor number (only for this dataset) is suppressed. When the floor number "0" is entered, the output is "ground floor". If there is no entry, 127 will be inserted automatically.</li> </ul>
<div style="border: 1px solid black; padding: 5px;"> <p style="text-align: center;"><b>Add resident</b> Serial no. 1:</p> <hr/> <p style="text-align: center;">235754</p> <hr/> <p>↵ = Save ESC = Cancel</p> </div>	<ul style="list-style-type: none"> <li>Enter the serial number of the indoor station which is to be called. (Entry is necessary!)</li> </ul>
<div style="border: 1px solid black; padding: 5px;"> <p style="text-align: center;"><b>Add resident</b> Serial no. 2:</p> <hr/> <p style="text-align: center;">234789</p> <hr/> <p>↵ = Save ESC = Cancel</p> </div>	<p>A second serial number (from two indoor stations) can be allocated to a resident dataset. Thus, it is possible that two different indoor stations ring simultaneously.</p> <ul style="list-style-type: none"> <li>Enter the serial number of the second indoor station. (An entry is not strictly necessary.)</li> <li>Confirm the entry, even if no serial number has been entered.</li> </ul>
<div style="border: 1px solid black; padding: 5px;"> <p>13:01 <span style="float: right;">0.0°C</span></p> <p>Bahrtdt, M. Bartum, J. <b>Baumgarten, E.</b></p> <p>Carrion Höckelmann <b>OK Help   Calling</b></p> </div>	<p>If you have confirmed the entry of your last dataset, you return to the resident menu.</p> <ul style="list-style-type: none"> <li>Select another action. or</li> <li>If you have completed all actions, select <i>sort</i>. The resident list is sorted alphabetically.</li> </ul> <p>Sorting: exclamation mark, number, special character, lower case, upper case. Umlauts are sorted after the respective vowels.</p>

**Modify resident**

Display / Entry	Action / Description
	<ul style="list-style-type: none"> <li>Select the name to be modified from the resident list.</li> </ul>
<p>OR:</p>   	<ul style="list-style-type: none"> <li>Press F3 key on PS/2 keyboard</li> </ul> <p>or:</p> <ul style="list-style-type: none"> <li>Select <i>Resident</i> in the main menu.</li> <li>Select <i>Change</i> in the resident menu.</li> </ul>
	<ul style="list-style-type: none"> <li>Make the changes.</li> <li>Confirm each entry.</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>! Attention: Save your entries by pressing the OK/Enter key, otherwise the dataset is rejected!</b></p> </div> <ul style="list-style-type: none"> <li>Start sorting the resident list.</li> </ul>

**Delete residents**

Display / Entry	Action / Description
	<ul style="list-style-type: none"> <li>Select the name to be modified from the resident list.</li> </ul>
<p>or:</p>   	<ul style="list-style-type: none"> <li>Press F4 key on PS/2 keyboard</li> </ul> <p>or:</p> <ul style="list-style-type: none"> <li>Select <i>Resident</i> in the main menu.</li> <li>Select <i>Delete</i> in the resident menu.</li> </ul>
	<ul style="list-style-type: none"> <li>Press F1 key to delete the resident. The selected resident dataset is deleted.</li> </ul> <p>(delete all datasets see p. 21)</p>

## TCS:BUS<sup>®</sup>, operation, various about AMI1010x

- Note: After every step, save the data on the EEPROM memory: perform the process *various > store memory* (see p. 20).

TCS:BUS <sup>®</sup>		main menu > TCS:BUS <sup>®</sup>

## F8, F9, F1 – keys for operation

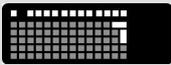

The keys of the PS/2 keyboard correspond to the operating elements of the front-door station:

	PS/2 key-board	Front-door station
Enter access code (only devices with keypad)	F8	C
Bell button: call a resident	F9	
ABC button: select initial letter	F10	A B C

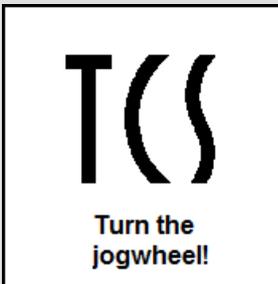

## Adjust the contrast of the display

F11

F12

The contrast of the display can be adjusted with F11/F12 in 48 steps:

### Reduce the contrast

- Press the F11 key on the PS/2 keyboard until the desired contrast is adjusted.  
The font appears brighter.

### Increase the contrast

- Press the F12 key on the PS/2 keyboard until the desired contrast is adjusted.  
The font appears darker.

Factory setting = middle position

## Adjust volume voice output

- This function can only be called up while a voice connection is established. With this function, the volume of loudspeaker and microphone can be adjusted.
- The volumes should be adjusted after the resident data has been entered.

Ex works, the factory setting is set to medium. Please observe when adjusting the volume: The volume of loudspeaker and microphone cannot be adjusted independent of each other. If the volumes are too high, a feedback effect occurs (whistling).
